

Tips and Tricks to avoid Water Buckets freezing

HERE ARE 5 WAYS TO AVOID WATER FREEZING!

1. A BALL

Add a ball that can move around, that they won't be able to accidentally swallow, in the water. Moving water doesn't freeze.

2. HOT WATER

Add boiling water to the bucket, this way the water has to cool down before it can have the chance to freeze

3. VINEGAR

Add a few drops of vinegar to the water. This creates a barrier for freezing.

4. BUBBLE WRAP

Insulate your bucket boiling/warm water with bubble wrap and duct tape. Insulate your pipes too.

5. ELECTROLYTES

Add electrolytes to the horse's water to keep them hydrated, and the water from freezing. Research them well before giving or adding to the water.
